

GBD Technical Training Workshop

May 3-13, 2016
Negroponte Resort, Greece

Understanding the pathway from data to DALYs

About the workshop

Learn from the creators of the Global Burden of Disease (GBD) about its systematic approach and the science behind it. This workshop will provide opportunities for hands-on work using GBD methods, tools, data, and visualizations, as well as a forum for discussing results and the future of the GBD study. Training components include instruction in GBD methods, key assessment factors for data, principles underlying the analytic process, and how to interpret results.

Cultivate your GBD knowledge

- Gain an in-depth understanding of the scientific approach used in the GBD study.
- Cultivate knowledge of the various analytical methods utilized in the GBD study.
- Enhance expertise to use and interpret interactive data visualization tools for benchmarking, analysis, and priority-setting.
- Learn to identify and critique various country-level data sources for burden of disease estimation.
- Expand your network by joining the GBD consortium, a global community of researchers and policymakers.

Who should attend

This workshop is a great opportunity for researchers, academic leaders, policymakers, and individuals working at non-governmental organizations, foundations, country offices of health statistics, and national and multinational health organizations.

Registration

Registration fee: **US\$5,750.00.**

The registration fee includes tuition, training materials, accommodations, and meals, including breakfast, lunch, and dinner.
