

# Financing Global Health 2015

## Health focus areas

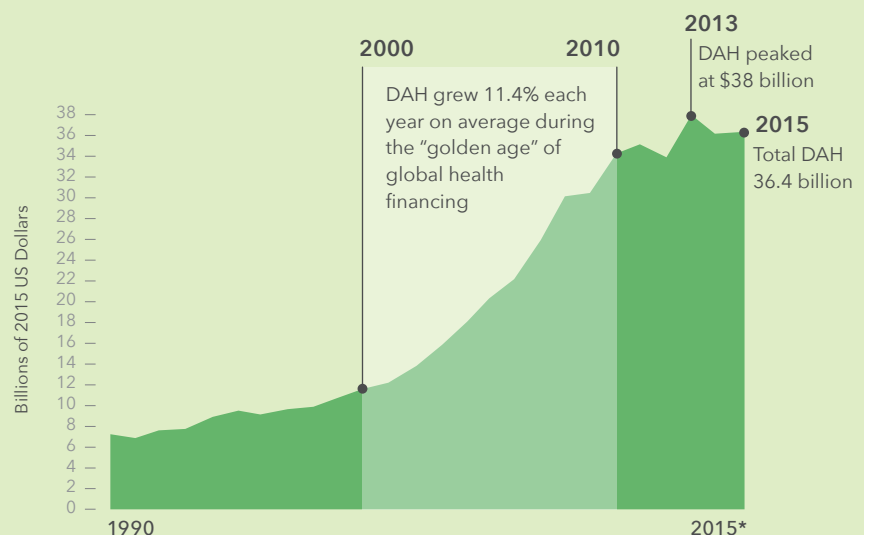

Changes in DAH by health focus area in 2000 to 2010 and 2010 to 2015

\*NCD = Non-communicable diseases

\*\*SWAps/HSS = Sector-wide approaches/health system strengthening

## Spending on development assistance for health (DAH)

\*Preliminary estimates for 2014 and 2015

## Financial flows

From 2000 to 2015, 32% of development assistance for health (DAH) was sourced from the US government and 26% focused on HIV/AIDS. Across channels, the collection of NGOs and foundations active in health disbursed the most DAH, at \$95.8 billion.

## Program areas

**HIV/AIDS:** Of total HIV/AIDS DAH in 2015, 25% focused on treatment and 18% concentrated on prevention (excluding prevention of mother-to-child transmission).

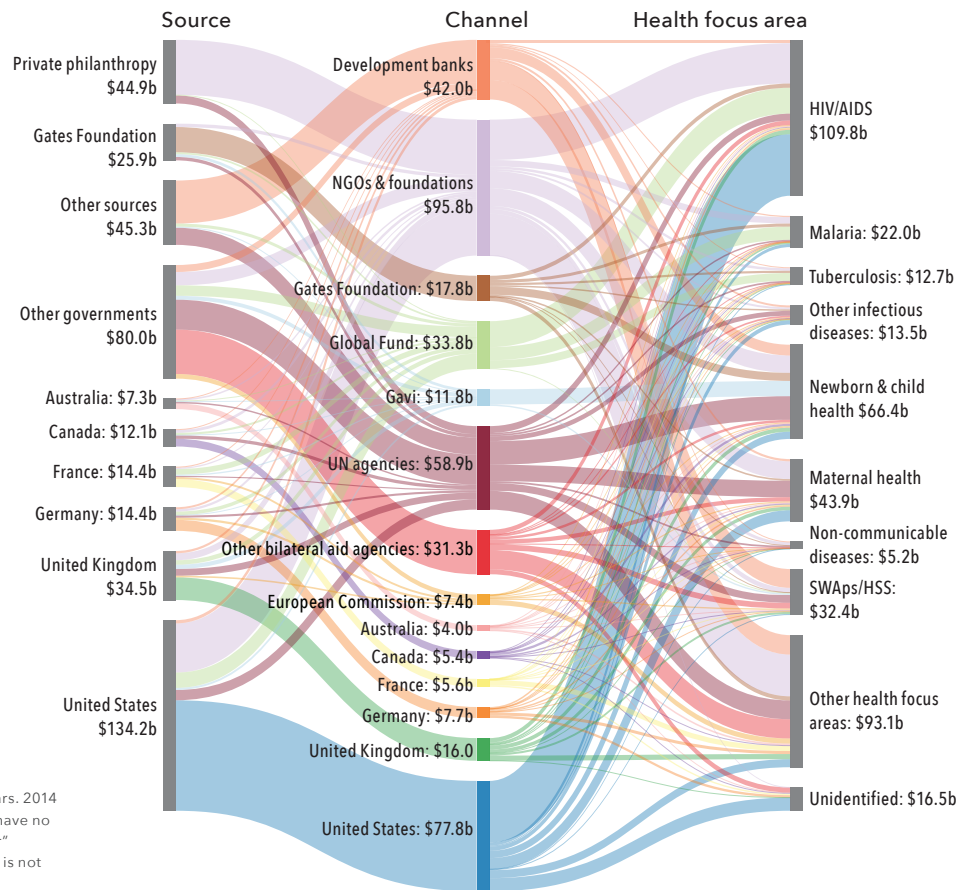

**Child health:** In 2015, 24% of funding for child health focused on nutrition, while 45% was allocated to vaccines.

**Maternal health:** Family planning was the focus of 34% of maternal health DAH in 2015.

**NCDs:** NCD DAH focused most substantially on mental health (27%) and anti-tobacco activities (9%).

Note: Cumulative DAH from 2000 to 2015 in billions of US 2015 dollars. 2014 and 2015 are preliminary estimates. Health assistance for which we have no health focus area information is designated as "unidentified." "Other" captures DAH for which we have project-level information but which is not identified as funding any of the health focus areas tracked.

## Cumulative development assistance for health, 2000-2015

## DAH forecasts

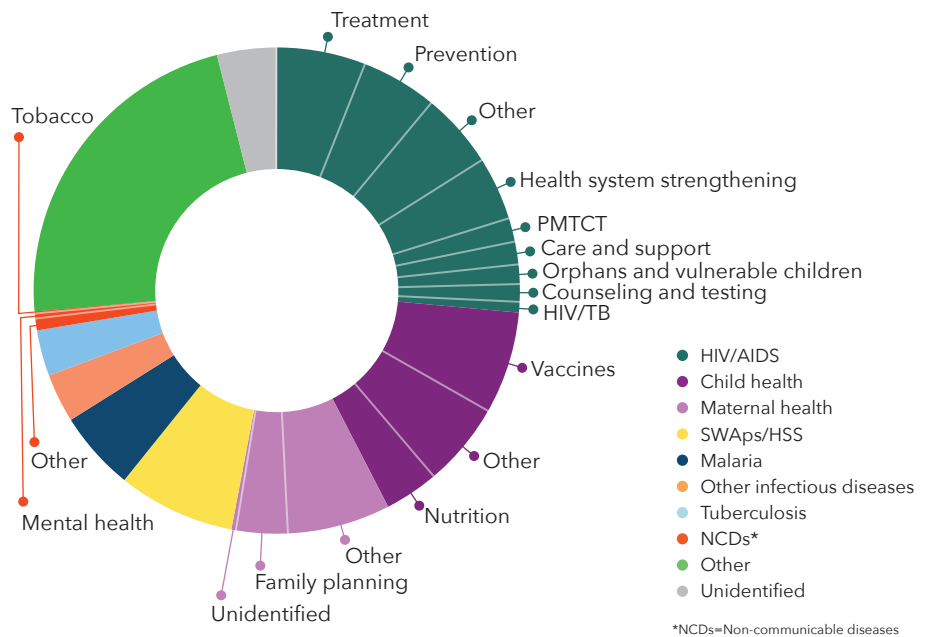

### The uncertain future of DAH

Trends and relationships over the last 26 years suggest that \$64.1 billion in DAH will be provided in 2040. However, the confidence interval surrounding these estimates spans \$30.4 to \$161.8 billion. Uncertainty in these estimates underscores the opportunity for investment in health in many low- and middle-income countries.

### Estimating DAH, 2015-2040

## DAH by health focus areas and program areas, 2000-2015
