The IHME Post-Bachelor Fellowship

Using big data to improve the world’s health

Fellows at the Institute for Health Metrics and Evaluation (IHME) impact the health of billions of people by analyzing data and developing new tools. At IHME, we analyze the world’s health data to make better decisions about important health problems. This requires insights from a variety of fields, from computer science to anthropology.

Post-Bachelor Fellows (PBFs) use creativity to solve complex global health problems. As a PBF, you will join a community of passionate researchers in our dynamic research institute. We value diversity, innovation, and critical-thinking.

Make an impact on billions of lives

Advance in a collaborative learning environment

Work alongside leading researchers from more than 100 countries around the world

A unique opportunity to live in Seattle, a hub of global health and technology

“Dr. Chris Murray and his team at the Institute for Health Metrics and Evaluation launched the Global Burden of Disease, using data from researchers around the world. The idea behind Chris’s work is simple: We can’t cure what we don’t understand. If we know what the biggest killers are, we can make sure our efforts to save lives are aimed at the right things.”

– Bill Gates

“I felt really amazing to see that something I worked on directly is making people healthier in another country in the world.”

– Former PBF Kyle Heuton
